

Energy efficiency for the NHS built infrastructure

energysgroup.com

A photograph of a modern NHS built infrastructure hallway. On the left is a white reception desk with a potted plant. In the center is a gurney. On the right is a mobile medical device on wheels. The hallway is bright and clean, with a checkered floor pattern.

energysTM

Trusted

Delivering energy efficiency into the NHS built infrastructure

Energys Group's carbon reduction expertise is trusted and relied upon by Government, utilities and industry.

Since our earliest days as an energy consultancy we have helped UK government departments, some of Britain's biggest and best-known businesses and many cost-conscious healthcare trusts to reduce CO2 emissions and save money.

Purpose

Electricity accounts for over 50% of a hospital's energy costs

This is why we are actively helping the NHS to meet its carbon reduction targets by reducing demand and making its buildings more energy efficient.

Approach

Our approach is very simple

We don't over-complicate, we don't baffle with science, and we don't over-engineer.

We just listen to our customers, define the right solution for their application, and offer every level of support and guidance needed.

Frameworks

We are an approved NHS Framework supplier

Frameworks give you access to pre-qualified organisations – thereby ensuring both an efficient and cost-effective delivery.

We are an approved supplier on Essentia Trading's energy saving LED lighting framework for the NHS and other public sector organisations. We are also an approved supplier under the YPO Framework. Both frameworks provide a free service to NHS Trusts to support the entire process from bidding for Grant monies, through tendering the work and delivery of the solution.

LED Lighting

Cut costs by upto 80%

LED Upgrades

Save upto 80%

Lighting Controls

Save upto 40%

Combined Heat & Power

Energy savings of upto 30%

Boiler Controls

Save costs by upto 40%

ValveWrap

Payback in 18 months

Technologies

No ordinary energy technology company

Our portfolio of technologies is proven to deliver on carbon reduction.

Expertise

De-risking projects and adding value

We have built up many years of expertise delivering carbon savings to the healthcare sector.

By drawing on this experience we significantly de-risk your projects and add value at every stage.

What's more, we manufacture our own range of high quality LED lighting. This, coupled with the expertise of our own in-house installation team, means we can offer a truly cost effective turnkey solution.

Opportunities

Beyond energy savings

An estimated 20% of energy in the NHS is wasted*. This is a lost opportunity. Energy efficient buildings typically offer healthier, optimised environments for patients and staff.

What's more, better control of energy usage enables NHS Trusts to comply with mandatory targets and legislative requirements; and positive action to reduce energy use can help engage with stakeholders and the local community.

*BRE

Supportive

Big enough to cope, small enough to care

As an SME, our business is structured so that it is big enough to cope with the most demanding of projects, yet small enough to care.

Whatever you need, we provide support at every stage of your carbon reduction journey.

- Funding
- Installation
- Product supply
- Project management
- Consultancy & advice
- Payback & ROI calculations
- Measurement & verification

Partnership

Understanding of complex characteristics

Our inherent understanding of your energy challenges enables us to unlock maximum long-term savings across your estate.

We provide a broad range of services in-house or, alternatively, we can work with your existing FM or supply chain network.

Commitment

Quality & Accreditation

We take our commitment to quality, safety and environment responsibility incredibly seriously.
